

Onsite Power Below the Cost of the Grid

public energy

We're an independent power producer with a difference:

- We supply power to your commercial / industrial facility **from your site**.
- We **finance, own, operate and maintain** the solutions and pay for the natural gas.
- We offer a **fixed price per kWh** for the energy you use.
- Your savings of **10 to 30%** are demonstrated up front.

The DER solutions provider you've been waiting for is here.

- Free your site from volatile power prices.
- Save 10-30% on energy & grid charges.
- Reduce your peak and demand charges.
- Generate Demand Response revenues.
- Minimize your brownouts and blackouts.
- Reduce your carbon footprint.
- We own, operate, finance and maintain the system – at your plant.
- We offer 5 / 10-year fixed price contracts.
- We use new Siemens equipment – over 2,500 MW installed globally.
- We look after the onsite installation and the grid interconnection.

Simple Process to Determine your Operational Cost Savings

All we need to determine how much you can save is:

- 24 months of hourly interval electric meter data (Excel)
- 12 months of electricity distribution bills (PDF)
- 12 months of natural gas distribution bills (PDF)
- 12 months of energy retailer bills (if applicable) (PDF)

Pre-engineered Solutions Designed to Your Requirements:

Applications and benefits for all commercial / industrial needs:

- **Baseload** – provides continuous power needs onsite – hedge on grid price increases.
- **Peak Avoidance / Demand Response** – provides power needs onsite for peak pricing or for DR programs.
- **Carbon footprint** reductions – where the grid has a large share of coal.
- **Cost Savings** – lower your energy and delivery costs.
- **Seamless interconnections** with the grid.
