

# The road to carbon-free energy is paved with flexible solutions.

## Services.

---

**Baseload Prime Power.** Provided on a cents per kilowatt-hour basis.

---

**Baseload Combined Heat and Power (CHP).** Provided on a cents per kilowatt-hour basis with heat included in the electricity price.

---

**Peak Shaving / Demand Response.** Based on a fixed monthly price that maximizes your savings under your demand response/curtailment program rules.

---

**Improved Power Quality.** Stop paying for energy you're not using. We'll surface lower power quality leaks and identify ways to eliminate them.

## Model.

Put electric power generation on-site. Run renewable natural gas, solar, wind, or hydrogen. Only call on the grid for supplemental and backup resources.

---

**Transition** to alternative fuels (RNG + hydrogen).

---

**Save** 10% to 30 % on energy costs from day one.

---

**Financed.** No capital expenditure.

---

**In Ontario?** Go carbon neutral.

---

**In the US?** Reduce your carbon emissions.

---

**Flexible.** Our modular, scalable solution lets you add new 1 - 2 MW shipping containers as needs grow. Stackable units can be outfitted with support legs for underneath access.

---

**Resilient.** "Islanded" solutions insulate systems from grid outages and momentary disturbances. An ATS (Automatic Transfer Switch) activates in milliseconds to ensure uninterrupted service.

---

**Redundant.** Grid 'parallel' solutions allow simultaneous power flow paths. If one goes down, a redundant path remains open.

---

**Sustainable.** Our fuel solutions comply with all state, provincial and municipal regulatory emission standards and requirements by design.

## Process.

The "road" in your energy transition roadmap starts here. [Get in touch.](#)
